

STM32F407VGT6 — Datasheet Extract

Manufacturer: STMicroelectronics

Part number: STM32F407VGT6

Core: ARM Cortex-M4, 168 MHz, hardware FPU

Communication interfaces: UART, SPI, I2C, CAN bus, USB, Ethernet

Firmware version supported: v2.3.1

Known issue: CVE-2023-44487 (rapid reset / resource exhaustion class)

This device is commonly deployed in industrial controllers using the Modbus and CANopen protocols for field-bus communication.

Page 2 continues with electrical characteristics and pin mapping.

Page 2 — Pinout & Electrical Characteristics

Operating voltage: 1.8V - 3.6V. Max clock: 168MHz.

See schematic diagram (sample_schematic.png) for wiring.
